Effective August 21st, 2023, the Naval Air Warfare Center Aircraft Division (NAWCAD) has disapproved Timken Aurora's qualification status for SAE-AS81820 and SAE-AS81935 specifications. Timken Aurora is working diligently to get requalified.

TIMKEN AURORA BEARING COMPANY

Manufacturing and worldwide supplier of the highest quality rod ends and spherical bearings - anywhere!

GENERAL INFORMATION

Since 1971, Timken Aurora Bearing Company has been a major force in the rod end industry.

Known primarily for a high quality product and a strong commitment to customer service, the firm dramatically increased its market coverage and now serves nearly every industry and aerospace market. These markets include among others: textile and packaging machinery, machine tools, business machines, recreation and exercise equipment, agricultural and off highway vehicles, commercial transportation and high performance racing vehicles as well as military equipment and commercial air and spacecraft.

Over the years, Timken Aurora Bearing has retained its original business philosophy of furnishing a high quality product at competitive prices. In addition, the company's initial goals of providing prompt delivery and furnishing service with a personal touch have been rigidly maintained.

Timken Aurora Bearing offers a complete line of standard rod end and spherical bearings. We also design and manufacture special bearings to meet a variety of applications that require custom engineered units or special materials.

Now marketing products worldwide, Timken Aurora Bearing fields a very competent sales force that is available to assist and provide you with a practical and sound solution to rod end and spherical bearing application problems and challenges.

PRODUCT INFORMATION ENGINEERING DATA AND ROD ENDS

Timken Aurora Bearing Company rod ends are, unless noted, manufactured utilizing two construction styles. They are of the two or three-piece type. Both are made with the solid, or one-piece, race construction method and feature the advantages of metal-to-metal contact between bearing components. (PTFE to metal interface may also be incorporated when specified).

The standard two-piece style consists of a body and precision ground heat treated steel ball. This type of construction allows the rod end body to carry a greater radial static load. This configuration also offers greater misalignment capabilities. A variety of materials and plating options for the component parts in this series are available. Any cold-formable steel in the stainless and alloy steel categories can be specified for the body, and all hardenable alloys such as 52100 and 440C stainless steel may be employed for the ball component.

The three-piece style consists of a body, ball and race. This type of unit, offering fully swaged bearing construction, features the advantages of optimized spherical conformity between the ball and race. It also offers flexibility in that many different types of materials can be interchanged in each component part, providing combinations that can be tailored to meet just about any application requirement.

The SPM/SPW series features a proprietary molded liner system with low friction and low moisture absorbing properties.

Consult our engineering department for materials to fit your special application. Materials used in the standard catalog items are outlined on the appropriate detail page.

SPHERICAL BEARINGS

These bearings incorporate the single piece race type construction, providing optimized ball-to-race conformity. They can be re-lubricated through an annular groove in the outer race with two interconnecting holes positioned at 180 degrees. Various metals may also be substituted in these types of units to meet special requirements. Recommended housing bores are given on pages 110-112.

PTFE LINED ROD ENDS AND SPHERICAL BEARINGS

Composite PTFE lined races are available as noted in most rod end bearing units and all spherical bearings. The steel race has a self-lubricating liner; a PTFE impregnated woven fabric, chemically bonded to the inner diameter of the race, and is denoted by the suffix "T". All Timken Aurora Bearing liner style options are maintenance free and offer improved frictional characteristics. They have been developed by Aurora engineers specifically for bearing use, and are exclusive to Timken Aurora Bearing products.

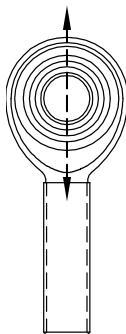

Except as noted, AT1400 is supplied as the standard liner in all commercial units. It is designed primarily to satisfy the demands of the commercial/industrial market as well as most high performance applications. This liner can be used in temperatures ranging from -65° to +250° F.

AT2100 is used in commercial units with stainless steel race construction. It is tailored for applications with aqueous environments.

Aurora 2 piece rod ends with the prefix "V" use Aurora's steel backed PTFE composite liner, resulting in the benefits of a PTFE lined bearing at an economical price.

Timken Aurora Bearing also has available a variety of alternate liner configurations to suit special requirements. Information on these and other liner configurations can be found on page 118.

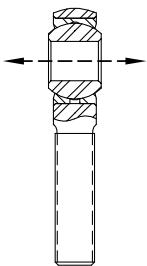

ULTIMATE RADIAL STATIC LOAD CAPACITY ROD ENDS

The ultimate radial static load capacity is based upon the minimum mechanical properties of the design configuration in the stressed area. The ultimate radial static load capacity called out in the rod end specification charts is defined as a single cycle, unidirectional applied load to cause ultimate failure. Operating loads should be based on the static load ratings, incorporating appropriate safety factors to suit the application. When a rod end or spherical bearing is to be applied in full rotation, the surface speed of the ball should be kept below 20 feet per minute or the rotational speed should be below 100 RPM, whichever is lower, with the operating loads not to exceed 10% of the ultimate radial static load.

Load ratings listed in the standard detail pages are applicable to rod ends supplied without grease fittings. Load ratings for units employing fittings may be affected due to lighter cross section in the stressed area. For information on the rod end radial static load ratings with fittings and other specific load rating information, consult the Timken Aurora Bearing engineering department.

AXIAL STATIC LOAD CAPACITY ROD ENDS

Axial static load capacity is the force that is applied through the bore of the ball. For Aurora two-piece rod ends, maximum axial static load capacity is recommended to be 15 percent of the ultimate radial static load capacity. For three-piece rod ends, maximum axial static load capacity is generally recommended as 10 percent of ultimate radial static load capacity. It should be noted, however, that on three-piece units factors such as race material, body material and dimensions may affect axial static load capacity. For further information, consult the Timken Aurora Bearing engineering department.

RADIAL STATIC LIMIT LOAD CAPACITY SPHERICAL BEARINGS

Unless otherwise noted, radial static loads are maximum static based on the maximum permanent set in the bearing race of 0.2% of the ball diameter. If greater permanent set can be allowed or if alternate race materials are used consult our engineering department for change factors. Operating loads are based on the radial static load rating and appropriate safety factors should be utilized to suit the application.

Max axial load is recommended at 20 percent of the radial static load. Extreme care should be used on selecting a sufficiently strong housing to accept this type of bearing.

BEARING MISALIGNMENT

A rod end or spherical bearing's ability to misalign is measured by the degree of angle the ball can accommodate without interference.

The angle of misalignment in a rod end is limited by the ball width and head diameter as shown in figure 1. This arrangement is called a clevis mount, and is the type represented in the standard rod end detail pages. If added misalignment is necessary, this can be accomplished by utilizing spacers between the clevis mounting and ball face, or by using special rod ends designed to meet specific requirements.

Misalignment angle in a spherical bearing is limited by the ball and race width with respect to the ball diameter, illustrated in figure 3. This is the mounting type represented in the standard detail pages for spherical bearings.

Mounting arrangements for spherical bearings such as shown in figures 2 through 4 are also used with rod ends. The misalignment angle is then calculated by selecting the proper formula.

ANGLE OF MISALIGNMENT

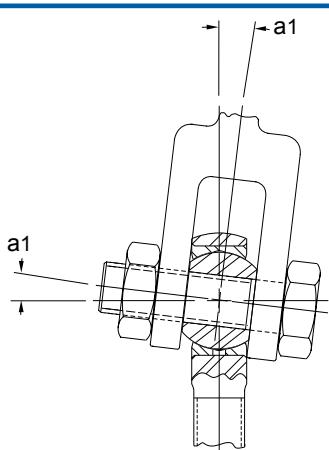

FIGURE 1

$$a_1 = \sin^{-1} \frac{w}{D} - \sin^{-1} \frac{h}{D}$$

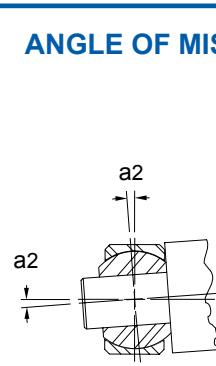

FIGURE 2

$$a_2 = \sin^{-1} \frac{w}{A} - \sin^{-1} \frac{h}{A}$$

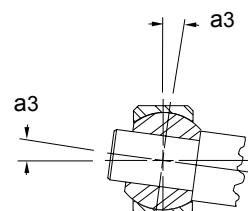

FIGURE 3

$$a_3 = \sin^{-1} \frac{w}{R} - \sin^{-1} \frac{h}{R}$$

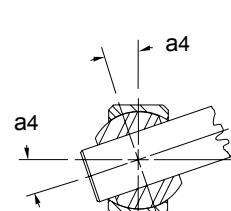

FIGURE 4

$$a_4 = \cos^{-1} \frac{B}{R} - \sin^{-1} \frac{h}{R}$$

Reference Letters

B - Ball Bore

M - Outer Race Chamfer

D - Head Diameter of Outer Race Diameter

R - Ball Diameter

H - Housing Width

A = $\sqrt{(D-2M)^2 + H^2}$

W - Ball Width

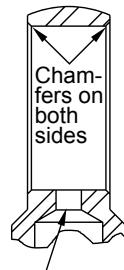

3-PIECE AND 2-PIECE BEARING DESIGN

3-Piece Unit

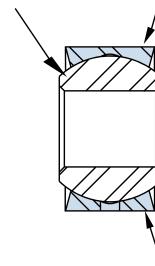

HOUSING

NOTE - Re-Lube hole for lubrication through shank of housing.

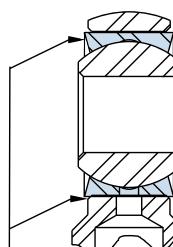

INSERT

Consists of BALL and RACE

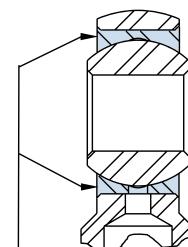

Single piece race,
steel, heat-treated
(optional), features
swaged construction
for maximum
performance.
Alternate race
materials available to
suit your application.

ASSEMBLED
HOUSING AND

Sides of housing
are closed
around ball
for maximum
strength unit.

SPM & SPB SERIES MALE ROD ENDS

Molded Race – Economy

Body - Low carbon steel, protective coated for corrosion resistance.

Ball - Alloy steel, heat treated, hard chrome plated.

Race - Molded, self-lubricating, reinforced Nylon.

Notes - All sizes available with studs upon request.

This series features a molded race compound designed to provide low friction, low moisture absorbing properties.

CW & CG SERIES FEMALE ROD ENDS

General Purpose - Economy

Body - Low carbon steel, protective coated for corrosion resistance.

Ball - Alloy steel, heat treated, hard chrome plated.

Notes - All sizes available with studs upon request.

†Left hand units have identification groove near end of shank.

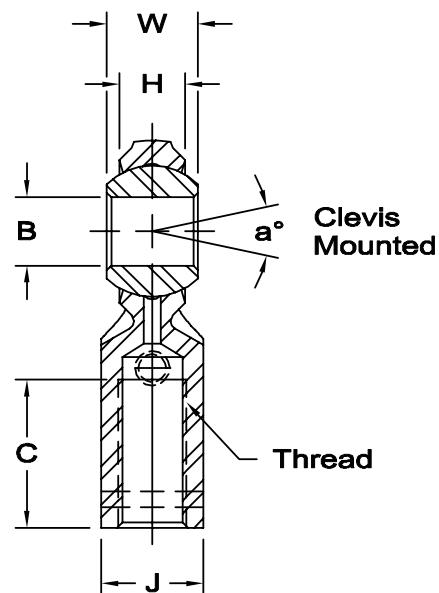

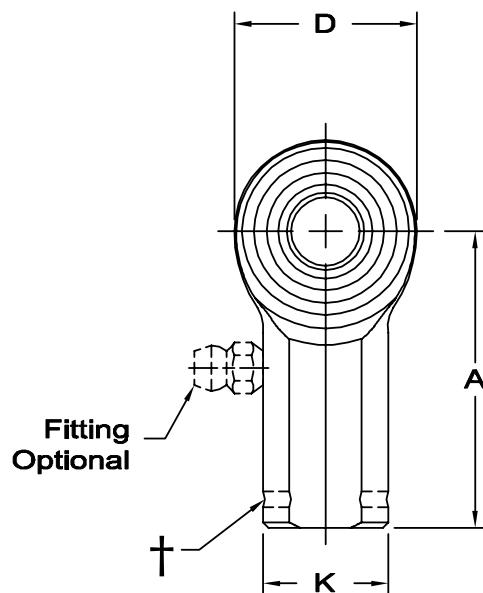

* Grease fittings not available on these sizes. Units are supplied without grease fittings. When a grease fitting is required, specify by adding suffix as designated.

CAM & CAB SERIES MALE ROD ENDS

High Strength – Economy Series

Body - Alloy steel, heat treated, protective coated for corrosion resistance.

Ball - Alloy steel, heat treated, hard chrome plated.

Notes - All sizes available with studs upon request.

Units are supplied without grease fittings. When a grease fitting is required, specify by adding suffix as designated:

Z Zerk type fitting

F Flush type fitting

Ex: CAM-6Z

Ex: CAM-6F

Load ratings apply only to rod ends without grease fittings.

For load ratings with fittings, please consult our engineering department.

*Grease fitting not available on this size.

BW & BG SERIES FEMALE ROD ENDS

General Purpose - Precision (Light Duty)

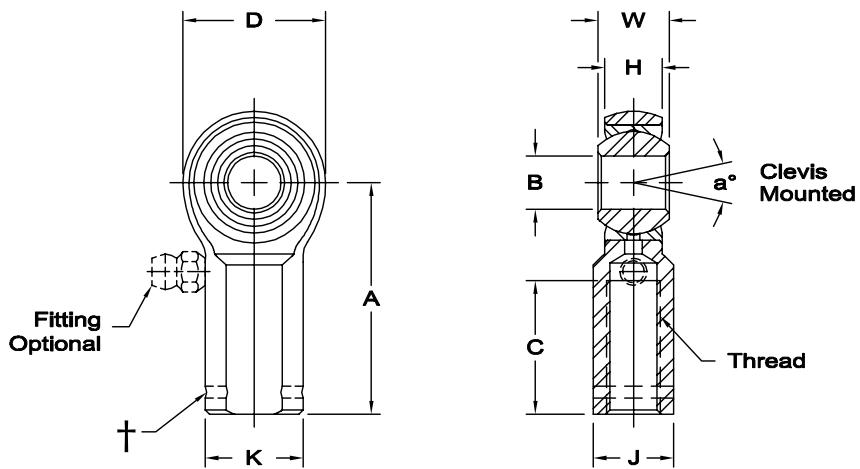

Body - Low carbon steel, protective coated for corrosion resistance.

Race - Sintered brass, oil impregnated.

Ball - Alloy steel, heat treated, hard chrome plated.

Notes - All sizes available with studs upon request.

Units are supplied without grease fittings. When a grease fitting is required, specify by adding suffix as designated.

Z Zerk type fitting

F Flush type fitting

XM & XB SERIES MALE ROD ENDS

Extra Strength – Heavy Duty Shank (PTFE Liners Available)

Body - Low carbon steel, protective coated for corrosion resistance.

Race - Alloy steel, heat treated protective coated for corrosion resistance. (Low carbon steel with PTFE liners.)

Ball - Alloy steel, heat treated, hard chrome plated.

Notes - All sizes available with studs upon request.

Load ratings apply only to rod ends without grease fittings. For load ratings with fittings, please consult our engineering department.

Units are supplied without grease fittings. When a grease fitting is required, specify by adding suffix as designated.

KM & KB SERIES MALE ROD ENDS

General Purpose - Precision - Wear Resistant

Body - Low carbon steel, protective coated for corrosion resistance. No. 16 series standard body is alloy steel not heat treated.

Race - Alloy steel, heat treated, protective coated for corrosion resistance.

Ball - Alloy steel, heat treated, hard chrome plated.

Notes - All sizes available with studs upon request.

* Check for availability.

1 Tolerance variation: "D" ± .020, "A" ± .020, "B" + .0035, - .0005, "H" ± .010

2 Tolerance variation: "D" ± .51, "A" ± .51, "B" + .089, - .013, "H" ± .25

3 Threads 1-14 UNS.

Units are supplied without grease fittings. When a grease fitting is required, specify by adding suffix as designated.

Z Zerk type fitting

Ex: KM-6Z

F Flush type fitting

Ex: KM-6F

Load ratings apply only to rod ends without grease fittings. For load ratings with fittings, please consult our engineering department.

CM-ET & CB-ET SERIES STAINLESS STEEL MALE ROD ENDS

Corrosion Resistant – Self Lubricating

timkenaurorabearing.com • Fax 630-859-0971

Body - 17-4 PH stainless steel, heat treated.

Ball - 440 C stainless steel, heat treated, hard chrome plated. (MFG. Option).

Bushing - 17-4 PH stainless steel, heat treated, PTFE lined.

Notes - All sizes available with studs upon request.

(1) Manufacturer's Option: -2A

XAM & XAB SERIES MALE ROD ENDS

High Strength Alloy – Heavy Duty Shank (PTFE Liners Available)

Body - Alloy steel, heat treated, protective coated for corrosion resistance.

Race - Alloy steel, heat treated, protective coated for corrosion resistance. (Low carbon steel with PTFE liners.)

Ball - Alloy steel, heat treated, hard chrome plated.

Notes - All sizes available with studs upon request.

Units are supplied without grease fittings. When a grease fitting is required, specify by adding suffix as designated.

Z Zerk type fitting Ex: XAM-6Z

F Flush type fitting Ex: XAM-6F

T PTFE Liner Ex: XAM-6T

Load ratings apply only to rod ends without grease fittings. For load ratings with fittings, please consult our engineering department.

LINKAGES

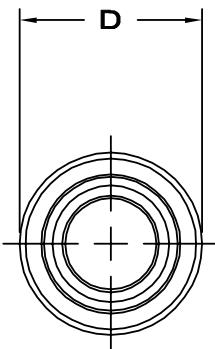

Beyond rod ends and spherical bearings for installation into customer components, Timken Aurora Bearing also manufactures linkages on a special order basis. Linkages can be combined with male or female rod ends and the appropriate connector, resulting in linkages with adjustable centers, or the appropriate rod end or spherical insert can be incorporated into a fixed length linkage. Linkages are not normally stocked, and minimum order quantities are required. Virtually all Aurora products, in inch or metric series, can be incorporated in these custom engineered products. Contact Aurora sales for further information.

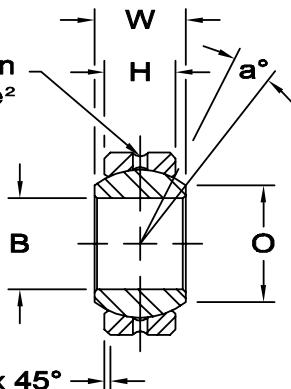

COM & HCOM SERIES SPHERICAL BEARINGS

(PTFE Liners Available)¹

Lubrication Hole²

Race - Low carbon steel, I.D. protective coated for corrosion resistance.

Ball - Alloy steel, heat treated, hard chrome plated.

* Bore tolerance on these items is as follows -
INCH: +.0025, -.0005; METRIC: +.064, -.013

1 PTFE Liners use suffix T Ex: COM-10T

2 PTFE Lined parts have no lubrication groove in race.
Hole manufacturers option.

MIB SERIES

Spherical Bearings (PTFE Liners Available)¹

Race - Low carbon steel, I.D. protective coated for corrosion resistance.

Ball - Alloy steel, heat treated, hard chrome plated.

Notes - All sizes available with studs upon request.

*Bore Tolerance on these items is as follows -
INCH: +.0035, -.0005; METRIC: +.089, -.013

¹ PTFE Liners use suffix T Ex: MIB-6T

² PTFE Lined parts have no lubrication groove in race.
Hole manufacturers option.

FRACTURED RACE* BEARINGS

*Also known as a split race bearings or light series bearings

These types of bearings are first and foremost intended for static situations where potential misalignments exist that can not be accommodated by bushings or clevises and pins.

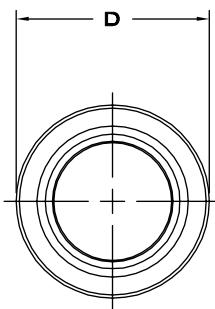

While these bearings are most commonly used in applications with heavy static loads with initial or assembly misalignment, they are also used for dynamic applications with slow dynamic misalignment, either pivotal, rotational, or combination. For dynamic applications subject to regular misalignment, a full swage bearing such as the COM series is recommended.

Race - 52100 steel, heat treated, protective coated for corrosion resistance.

Ball - 52100 steel, heat treated, protective coated for corrosion resistance.

RADIAL STATIC LOAD CAPACITY

These loads are the maximum safe operating loads for stationary applications, and assumes a sufficiently rigid housing and shaft. The radial static load capacity provides a 1.5 factor of safety against static fracture.

LUBRICATION

Bearings should only be used as delivered for static applications. For dynamic applications, a lithium-based grease with EP and MOS_2 additives is especially suitable. Lubricants of this type are recommended for operating temperatures between -40° F and $+250^\circ \text{ F}$ (-40° C and $+121^\circ \text{ C}$). For operating temperatures outside of this range, consult lubricant manufacturer.

Bearings should be adequately lubricated before installation, and relubricated at suitable intervals based on application demands. Demand factors include load and load direction, misalignment angle and frequency, ambient temperature and contamination level.

The dimensions and tolerances apply before surface treatment and splitting of the outer race. The outer race can become slightly out of round due to splitting, but when the bearing is mounted into the bearing housing, the roundness of the outer race will be restored. The measured value of the bearing outside diameter without mounting is not to be used as the original actual value of the outside diameter.

SPHERICAL PLAIN BEARINGS

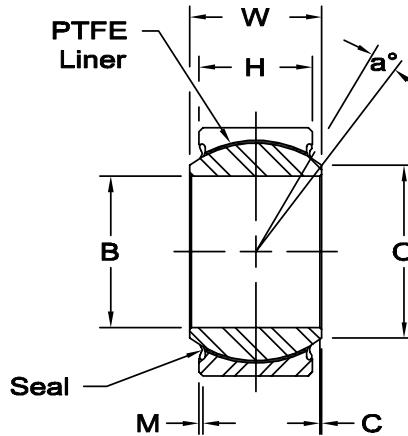

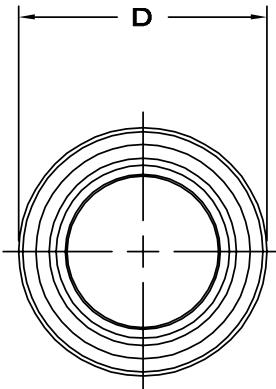

Inch – Sealed – PTFE Lined

GEZ..ET-2RS SEALED

Race - 52100 steel, heat treated, single fracture, PTFE lined.

Ball - 52100 steel, heat treated, hard chrome plated.

RADIAL STATIC LOAD CAPACITY

These loads are the maximum safe operating loads for stationary applications, and assumes a sufficiently rigid housing and shaft. The radial static load capacity provides a 1.5 factor of safety against static fracture.

LUBRICATION

Self lubricating PTFE liner.

The dimensions and tolerances apply before surface treatment and splitting of the outer race. The outer race can become slightly out of round due to splitting, but when the bearing is mounted into the bearing housing, the roundness of the outer race will be restored. The measured value of the bearing outside diameter without mounting is not to be used as the original actual value of the outside diameter.

RADIAL STATIC LOAD CAPACITY

These loads are the maximum safe operating loads for stationary applications, and assumes a sufficiently rigid housing and shaft. The radial static load capacity provides a 1.5 factor of safety against static fracture.

LUBRICATION

Bearings should only be used as delivered for static applications. For dynamic applications, a lithium-based grease with EP and MOS_2 additives is especially suitable. Lubricants of this type are recommended for operating temperatures between -40° F and + 250° F (-40° C and +121° C). For operating temperatures outside of this range, consult lubricant manufacturer.

Bearings should be adequately lubricated before installation, and relubricated at suitable intervals based on application demands. Demand factors include load and load direction, misalignment angle and frequency, ambient temperature and contamination level.

The dimensions and tolerances apply before surface treatment and splitting of the outer race. The outer race can become slightly out of round due to splitting, but when the bearing is mounted into the bearing housing, the roundness of the outer race will be restored. The measured value of the bearing outside diameter without mounting is not to be used as the original actual value of the outside diameter.

ALTERNATIVES TO FRACTURED RACE BEARINGS

READER
ENQUIRY
REFERENCE

020

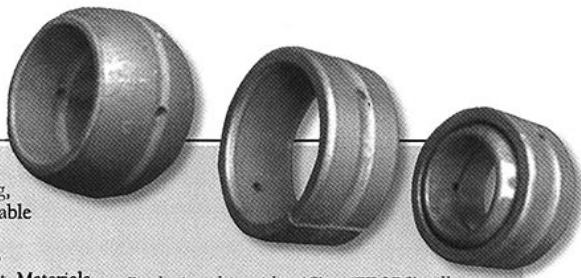

Most spherical bearings used in motorsport applications incorporate single-piece race construction, with the raceway formed around the ball. Swaged bearings provide close tolerance fits, allowing precise motion control.

Dampers and strut mounts (camber plates) often incorporate fractured race bearings, which use raceways manufactured separately from the ball, fractured across the circumference, and spread open to be assembled around the ball. Because the components are finished separately, these bearings do not have the ball to race conformity or close tolerance fit of swaged bearings. Industrially, they are intended primarily for static situations or slow dynamic applications, with incidental misalignment.

They are generally the least expensive form of spherical bearing, and not dimensionally interchangeable with common swaged bearings.

Swaged bearings are designed to accommodate regular misalignment. Materials are chosen to provide dynamic load-bearing capacity, as well as durability. Used in dynamic motorsport applications, users often find fractured race bearings deliver less than the desired precision and durability.

Alternatives to the metal-on-metal fractured race bearing are available, but not readily known. As with swaged bearings, PTFE lined alternatives are available from many bearing manufacturers. Fractured race bearing part numbers generally carry a suffix 'ES'.

Replacing this with a 'C' or 'ET-2RS' will specify the dimensional equivalent with a self-lubricating, clearance diminishing or eliminating PTFE liner. Certain manufacturers also offer full swage equivalents. Ultimately, manufacturer consultation will prove useful in determining beneficial specification upgrades.

GE..ES OPEN

GE..ES-2RS SEALED

Race - 52100 steel, heat treated, protective coated for corrosion resistance.

Ball - 52100 steel, heat treated, protective coated for corrosion resistance.

RADIAL STATIC LOAD CAPACITY

These loads are the maximum safe operating loads for stationary applications, and assumes a sufficiently rigid housing and shaft. The radial static load capacity provides a 1.5 factor of safety against static fracture

LUBRICATION

Bearings should only be used as delivered for static applications. For dynamic applications, a lithium-based grease with EP and MOS_2 additives is especially suitable. Lubricants of this type are recommended for operating temperatures between -40° F and + 250° F (-40° C and +121° C). For operating temperatures outside of this range, consult lubricant manufacturer.

Bearings should be adequately lubricated before installation, and relubricated at suitable intervals based on application demands. Demand factors include load and load direction, misalignment angle and frequency, ambient temperature and contamination level

The dimensions and tolerances apply before surface treatment and splitting of the outer race. The outer race can become slightly out of round due to splitting, but when the bearing is mounted into the bearing housing, the roundness of the outer race will be restored. The measured value of the bearing outside diameter without mounting is not to be used as the original actual value of the outside diameter..

* GE-12E only available without lube grooves and holes.

RADIAL STATIC LOAD CAPACITY

These loads are the maximum safe operating loads for stationary applications, and assumes a sufficiently rigid housing and shaft. The radial static load capacity provides a 1.5 factor of safety against static fracture.

LUBRICATION

Bearings should only be used as delivered for static applications. For dynamic applications, a lithium-based grease with EP and MOS_2 additives is especially suitable. Lubricants of this type are recommended for operating temperatures between -40° F and $+250^\circ \text{ F}$ (-40° C and $+121^\circ \text{ C}$). For operating temperatures outside of this range, consult lubricant manufacturer.

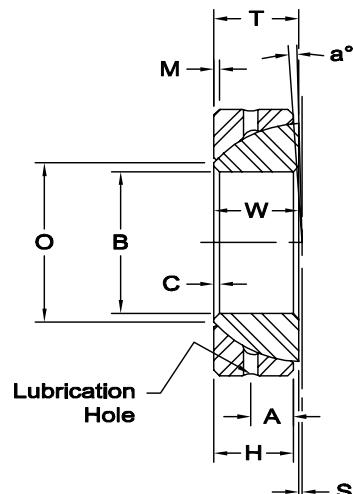

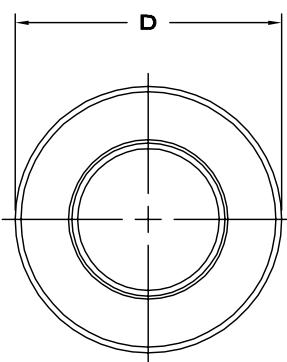

Bearings should be adequately lubricated before installation, and relubricated at suitable intervals based on application demands. Demand factors include load and load direction, misalignment angle and frequency, ambient temperature and contamination level.

The dimensions and tolerances apply before surface treatment and splitting of the outer race. The outer race can become slightly out of round due to splitting, but when the bearing is mounted into the bearing housing, the roundness of the outer race will be restored. The measured value of the bearing outside diameter without mounting is not to be used as the original actual value of the outside diameter.

Seals: -2 RS	-2 RS	-2 RS	SS	-2 RS	TT, SS

U = Approximate bore in inches. (ex. 5 = .5", 15 = 1.5")

V = Below 1", Bore in 1/16". Above 1" bore in whole inch + fraction in 1/16" (ex. 8 = 1/2", 108 = 1 1/2")

W = Bore is nearest metric equivalent for inch size. (ex. 12 = .5", .5" = 12.7 mm.)

X = Bore in 1/16". (ex. 8 = 1/2", 1/2" = 8/16")

Y = Bore in mm. (ex. 20 = 20mm.)

Y* = OD in mm.

Y** = Bore in mm. + bore of next size part offered (ex. 2025 = 20mm. bore, 25mm is bore of next larger size part offered)

Table to be used as a reference guide. Ultimate interchangeability should be determined by comparing relevant manufacturers specifications.

ROD END STUDS

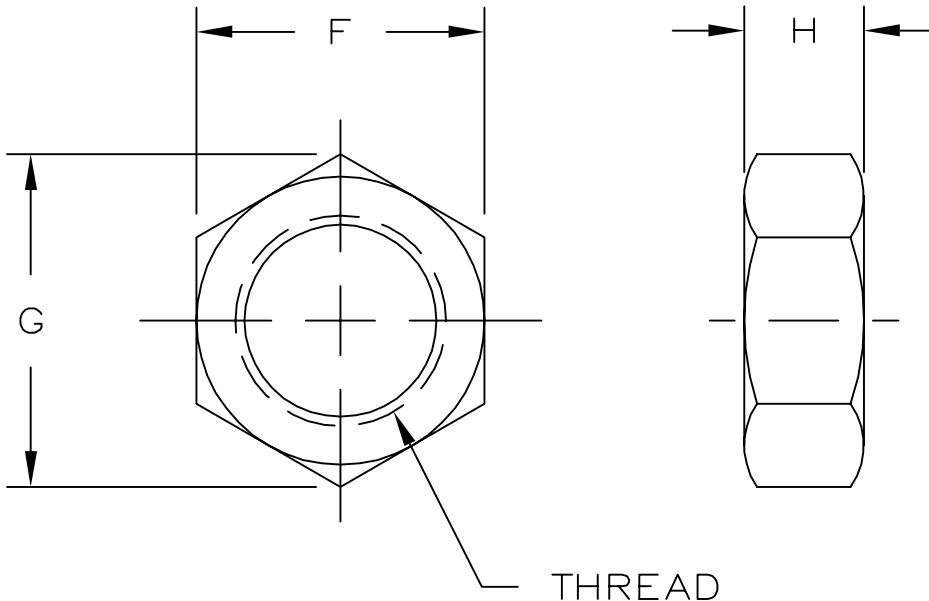

EX CM-8SZ
NOTES:

1. Stud configuration is shown as a 2-piece male, but is also available in 2-piece female, most 3-piece male and female configurations, and the AIB, MIB, and SIB spherical bearing configurations. Studs are specifically not available in the HXAM and COM series.
2. Grease fittings are not available on the CM-3S, CM-4S, CM-5S, or CW-3S rod ends. Units are supplied without grease fittings. When grease fittings are required, specify by adding suffix Z or F. (ex.: CM-8SZ). See page 78 for lubrication fitting information.
3. The standard grease fitting location (right hand location) is configured with the stud facing away from you while holding the rod end. If fitting must be oriented on the opposite side of the rod end, specify the left hand location.
4. The ultimate radial static load capacity is based on the shear strength of the stud.
5. Thread UNC-2A
6. Stud sizes 3 through 12 are normally stocked, size 2 and 16 are available on special order. Rod ends with studs installed are normally only stocked in the CM/CB series male rod ends, and CW/CG female rod ends. Studs are installed in rod ends of other series on a special order basis.
7. Standard stud material is low-carbon steel, protective coated for corrosion resistance.

NOTES:

- Flush type grease fitting (figure D) may be substituted for the zerk type grease fittings shown in figures A and B when properly specified with "F" suffix in the part number. (ex. AM-6F or AM-M10F)
- GF-0028 Zerk type grease fitting (Figure C) with ball check may be substituted when properly specified with "-28". (ex.: AW-6Z-28 or AW-M10Z-28) The substitution of GF-0028 may affect the usable thread depth of some female rod ends.

The Timken Aurora Bearing Company's reputation for designing and producing high quality commercial rod ends and spherical bearings grew extensively from the inception of the organization. Timken Aurora Bearing continually expanded its product lines, and its range grew to allow the firm to service virtually every major industrial market.

In those markets, Timken Aurora Bearing consistently demonstrated a reputation for furnishing reliable product. As a result, firms sought help from Aurora engineers and manufacturing specialists to solve difficult application problems.

Because of the skills demonstrated by Aurora in the commercial bearing market, Aurora's expertise attracted the attention of the military specification market.

By the mid 1980's Timken Aurora Bearing's total quality reputation was recognized by the aircraft airframe industry, and the Timken Aurora Bearing Company was solicited by airframe manufacturers to build products for them to their specifications. Similar recognition occurred in the land based and naval defense marketplace.

This prompted a decision to seriously enter the aircraft and defense markets, and by 1988 Timken Aurora Bearing Company was soliciting business on a controlled basis, in order to insure consistent customer satisfaction. These efforts resulted in a smooth and successful entry into the aircraft and defense marketplaces.

Building upon this success, the Timken Aurora Bearing Company then decided to aggressively enter the military specification bearing marketplace. Aurora now offers 14 standard lines of SAE specification rod end, spherical and journal bearings, presented on the following pages. These bearings utilize Aurora's AT3200, Aurora's exclusive PTFE liner system, qualified to the AS81820 Type A specification. These bearing series all are listed on the Qualified Products List (QPL) for military specification bearing products.

In addition, Aurora offers two standard rod end bearing lines as utilized in the general aviation field. These are manufactured under the same quality and SPC systems as the military approved bearings. Dimensions and configurations follow established industry conventions. Total traceability's are maintained through manufacturing up to and including shipping.

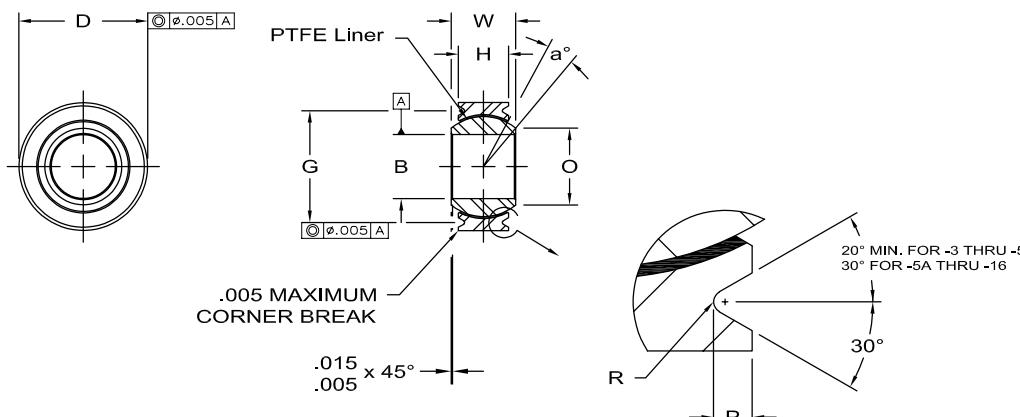

The growth of Aurora's standard military specification product offerings, as well as the extensive and diverse commercial/industrial line has allowed manufacturers to often achieve solutions with catalog items. Aurora's specialists are regularly called upon to work in partnership with customers to develop custom designed products for sophisticated aerospace and defense applications

ANC-T & ANC-TG SPHERICAL BEARINGS

Narrow - SAE Series AS14101 (Grooved)

Race - 17-4 PH stainless steel (AMS 5643), heat treated.

Ball - 440C stainless steel (AMS 5630), heat treated.

Liner - AT 3200 bearing liner, permanently bonded to race I.D., qualified to SAE-AS81820 Type A

NOTES:

1. Temperature Range: -65°F To +325°F (-54°C to +163°C)
2. Standard fit bearings are void of any "radial" or "axial" clearance
3. AT 3200 Bearing Liner System is qualified for procurement under SAE-AS81820 Type A
4. Spherical Bearings listed are manufactured to conform to the dimensions, materials, and configurations of SAE-AS14101 and SAE-AS14104 and are approved for procurement under this specification.
5. Non-standard material, dimensional, or configuration specifications (not per the SAE Aerospace Standard Specification) can be provided. Consult factory for additional information.
6. The Spherical Bearings listed are available in non PTFE lined, metal on metal configuration (not per the SAE Aerospace Standard Specification), as well as with alternate Timken Aurora Bearing PTFE liner systems. Consult factory for additional information.
7. ‡ Sizes -3, -4, -5, and -5A "R" = +.000, -.005
8. Consult factory for full specifications. Weight calculations listed are valid for standard outside diameter parts only.

Effective August 21st, 2023, the Naval Air Warfare Center Aircraft Division (NAWCAD) has disapproved Timken Aurora's qualification status for SAE-AS81820 and SAE-AS81935 specifications. Timken Aurora is working diligently to get requalified.

NOTES:

- Temperature Range: -65°F To +325°F (-54°C to +163°C)
- Keyslot, when specified, is compatible with locking devices: AS81935/3 for sizes -03 thru -08, and AS14277, NAS513, and NAS1193 for sizes -10 thru -16
- Keyslot designation "K" sizes -03 thru -08 (rounded slot) and sizes -10 thru -16 (square slot)
- Keyslot for sizes -03 thru -06 have 2 slots oriented perpendicular to the rod end hoop face (see diagram)
- Keyslot for sizes -07 thru -16 have 4 slots, 2 slots oriented perpendicular to the rod end hoop face (see diagram)
- Rod End Bearings listed are manufactured to conform to the dimensions, materials, and configurations of SAE-AS81935/2 and are approved for procurement under this specification
- Non-standard material, dimensional, or configuration specifications (not per the SAE Aerospace Standard Specification) can be provided. Consult factory for additional information
- The Rod End Bearings listed are available in non PTFE lined, metal on metal configuration (not per the SAE Aerospace Standard Specification), as well as with alternate Timken Aurora Bearing PTFE liner systems. Consult factory for additional information

‡ – 03 "G" + .000, -.060

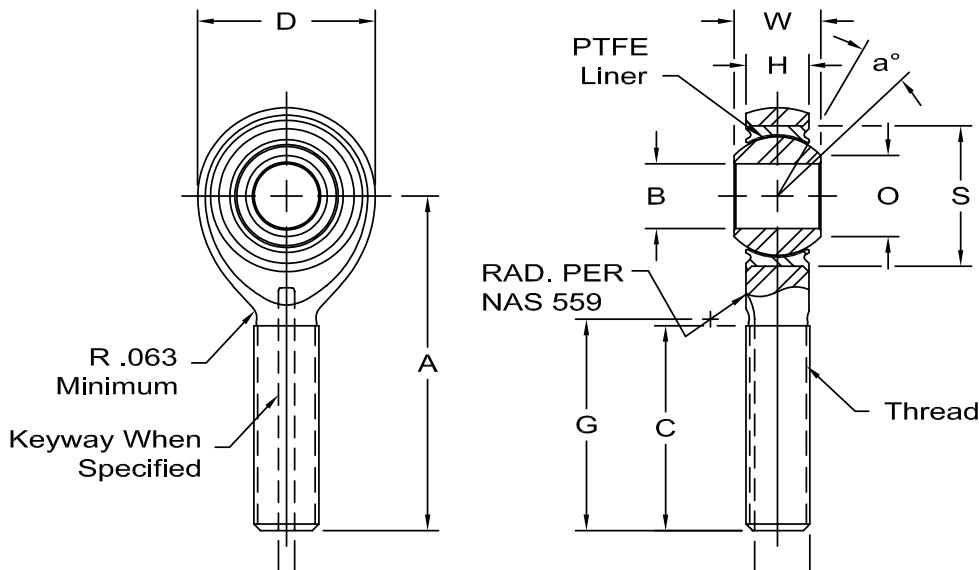

NOTES:

- Temperature Range: -65°F To +325°F (-54°C to +163°C)
- Keyway, when specified, is compatible with locking devices: AS81935/3 for sizes -03 thru -08, and NAS 513 for sizes -10 thru -16
- AT 3200 Bearing Liner System is qualified for procurement under SAE-AS81820 Type A
- Rod End Bearings listed are manufactured to conform to the dimensions, materials, and configurations of SAE-AS81935/8 and are approved for procurement under this specification
- Non-standard material, dimensional, or configurations (not per the SAE Aerospace Standard Specification) can be provided. Consult factory for additional information
- The Rod End Bearings listed are available in non PTFE lined, metal on metal configuration (not per the SAE Aerospace Standard Specification), as well as with alternate Timken Aurora Bearing PTFE liner systems. Consult factory for additional information

Effective August 21st, 2023, the Naval Air Warfare Center Aircraft Division (NAWCAD) has disapproved Timken Aurora's qualification status for SAE-AS81820 and SAE-AS81935 specifications. Timken Aurora is working diligently to get requalified.

ATM-ET & ATB-ET MALE ROD ENDS

SAE Series AS81935/8 (Right Hand) & AS81935/8 (Left Hand)

Body - PH 13-8 Mo stainless steel (AMS 5629), heat treated.

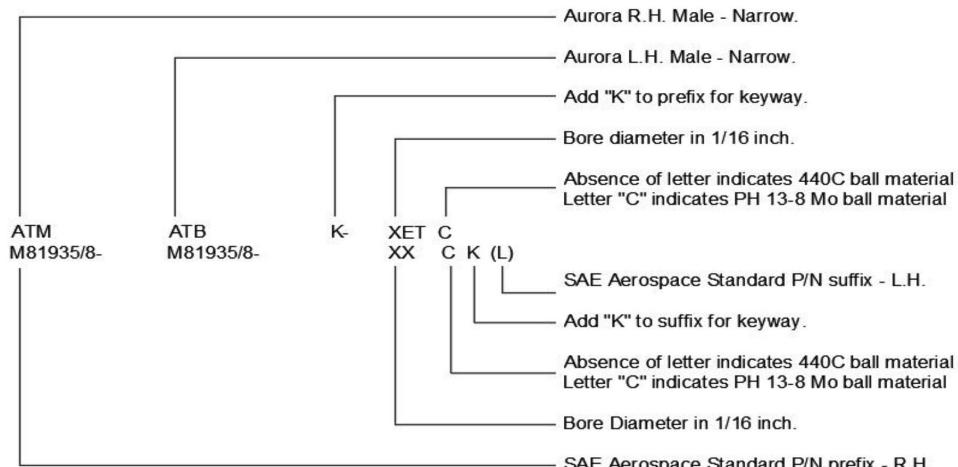

Race - 17-4 Ph stainless steel (AMS 5643), heat treated.

Ball - 440C stainless steel (AMS 5630), heat treated

Liner - AT 3200 bearing liner, permanently bonded to race I.D., qualified to SAE-AS81820 Type A

Stainless Steel parts (suffix "C") are available Cadmium plated (Suffix "P") or Zinc - Nickel plated (Suffix "E")
Ex.: AJB-4TC-008P or AJB-4TC-008E. Consult factory for full specifications.

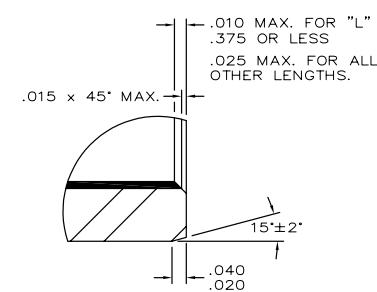

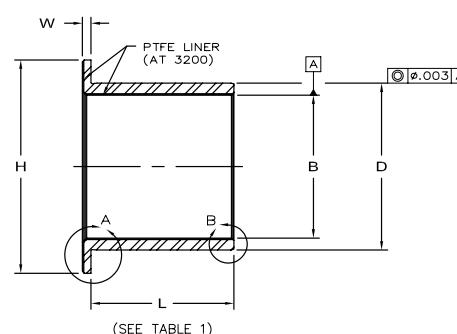

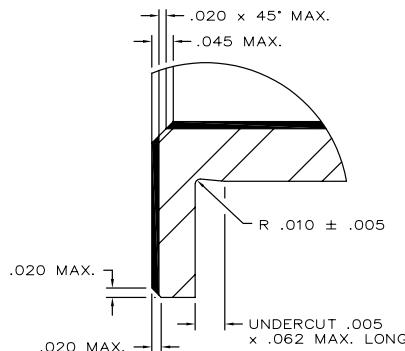

Oversize Outside Diameter (dimension "D") parts per Military spec. suffix "T" (+.010") and suffix "U" (.020") are available
Add suffix "D1" to specify .010" oversize, "D2" to specify .020" oversize. Ex.: AJB-4TC-008D1 or AJB-4TC-008D2.
Consult factory for full specifications. Weight calculations listed are valid for standard Outside Diameter parts only.

Effective August 21st, 2023, the Naval Air Warfare Center Aircraft Division (NAWCAD) has disapproved Timken Aurora's qualification status
for SAE-AS81820 and SAE-AS81935 specifications. Timken Aurora is working diligently to get requalified.

Aurora prefix

Bore diameter in 1/16 inch.

Material Code: "A" = Aluminum, "C" = Cres

Length in multiples of 1/32 inch

(CRES bearings only) Absence of the letters "P" and "E" Indicates no plating
Letter "P" indicates cadmium plating on the bearing outside diameter
Letter "E" indicates zinc-nickel plating on the bearing outside diameter

Absence of "D1" or "D2" indicates standard outside diameter

"D1" indicates .010" oversize ØD

"D2" indicates .020" oversize ØD

Absence of "T" or "U" indicates standard outside diameter

"T" indicates .010" oversize ØD

"U" indicates .020" oversize ØD

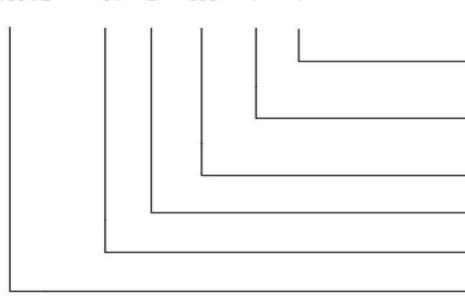

(CRES bearings only) Absence of the letters "P" and "E" Indicates no plating
Letter "P" indicates cadmium plating on the bearing outside diameter
Letter "E" indicates zinc-nickel plating on the bearing outside diameter

Length in multiples of 1/32 inch

Material Code: "A" = Aluminum, "C" = Cres

Bore Diameter in 1/16 inch.

SAE Aerospace Standard P/N

* Example of weight calculation: AJB-16TFA-016:

Sleeve Weight: (.031 lb/in) x .500 = .0155 lbs

Flange weight = .009 lbs

Total weight = .0245 lbs

AJB-TFA/-TFC FLANGED JOURNAL BEARINGS

SAE-AS81934/2

SPECIFICATIONS

“A”	Aluminum alloy AMS-QQ-A-200/3 or AMS-QQ-A-225/6 (2024T851 or 2024T8511), chemical film treatment per MIL-DTL-5541
“C”	Corrosion resistant steel, AMS 5643 (17-4 PH) Condition H-1150 per AMS-H-6875, Passivated per AMS 2700 or ASTM A967 (Cadmium, or Zinc-Nickel plate optional)
“T”	AT 3200 Bearing Liner System, permanently bonded to bearing I.D. qualified to SAE-AS81820 Type A

Stainless Steel parts (suffix "C") are available Cadmium plated (Suffix "P") or Zinc - Nickel plated (Suffix "E")

Ex.: AJB-4TFC-008P or AJB-4TFC-008E. Consult factory for full specifications.

Oversize Outside Diameter (dimension "D") parts per Military spec. suffix "T" (+.010") and suffix "U" (.020") are available Add suffix "D1" to specify .010" oversize, "D2" to specify .020" oversize. Ex.: AJB-4TFC-008D1 or AJB-4TFC-008D2.

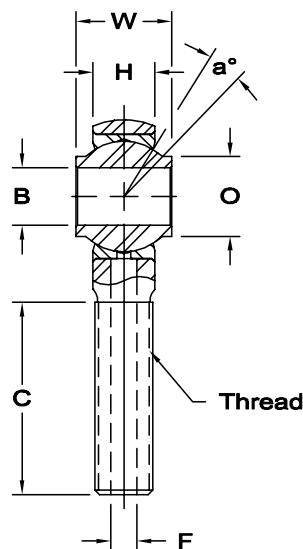

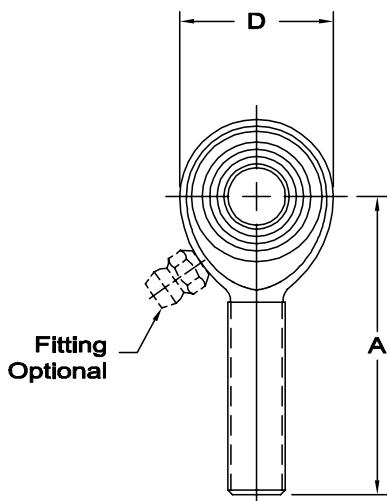

Consult factory for full specifications. Weight calculations listed are valid for standard Outside Diameter parts only.

Effective August 21st, 2023, the Naval Air Warfare Center Aircraft Division (NAWCAD) has disapproved Timken Aurora's qualification status for SAE-AS81820 and SAE-AS81935 specifications. Timken Aurora is working diligently to get requalified.

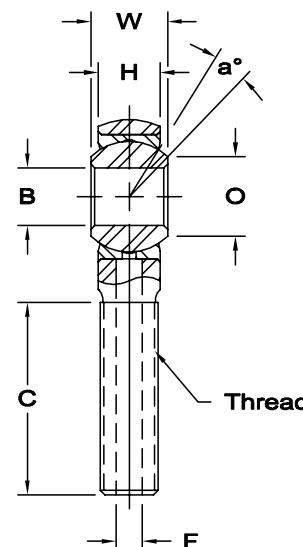

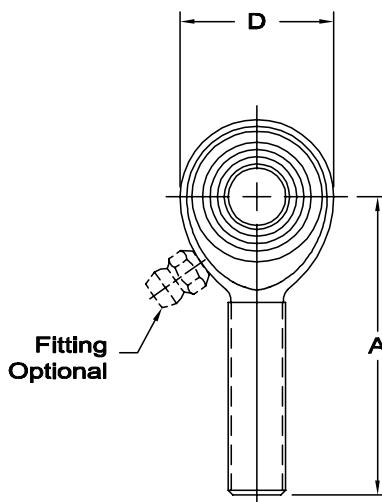

GMM-M & GMB-M SERIES MALE ROD ENDS

General Aviation - Precision

**DETAIL
“A”**

**DETAIL
“B”**

Body - Low carbon steel, protective coated for corrosion resistance.

Race - Low carbon steel, protective coated for corrosion resistance.

Ball - Alloy steel, heat treated, hard chrome plated.

Notes - Units are magnetic particle inspected after assembly.

Load ratings apply only to rod ends without grease fittings. For load ratings with fittings, please contact our engineering department.

Units are supplied without grease fittings. When a grease fitting is required, specify by adding suffix as designated.

Z Zerk type fitting

Ex: GMM-3MZ-470

F Flush type fitting

AIRCRAFT AND MILITARY SPECIAL PRODUCTS

Beyond Aurora standard catalog offerings, Timken Aurora Bearing has the capability to design, engineer, and manufacture special bearings and linkage assemblies. This is a small sample of items Aurora has produced for Aircraft and Military customers.

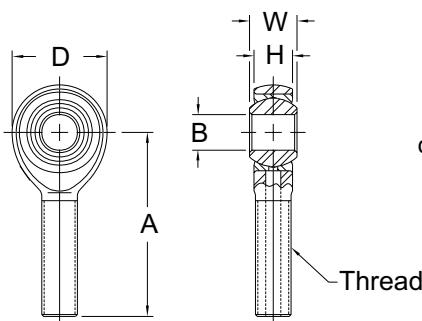

SPECIAL SIZE RACE CAR PARTS

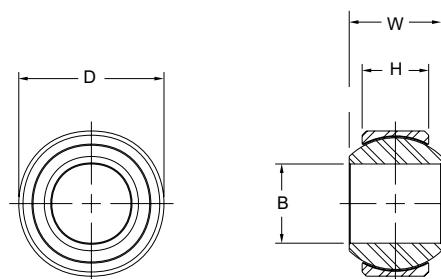

Parts commonly used in the race car industry, in non standard sizes and dimensions, along with common part number references. While not cataloged with standard parts series, many of these are stocked. Check with dealer or factory for availability.

SPECIAL SIZE RACE CAR SPHERICAL BEARINGS

Parts commonly used in the race car industry, along with common part number references. While not cataloged, many of these parts are stocked. Check with dealer or factory for availability.

SHOCK ABSORBER BEARINGS

Bearings used in motorsports shock absorbers or dampers, both as standard, and for common special applications.

SUGGESTED HOUSING BORES

Spherical Plain Bearings

ISO H7 - Fit recommended for light loads where axial displacement is required after installation.

ISO M7 - Press fit where bearing is subjected to combination, reversing, or shock loads.

ISO N7 - Recommended fit when using a light alloy housing (i.e. aluminum).

EXTRA HEAVY PRESS FIT - Recommended fit for applications with extreme shock loads that can also tolerate elevated breakaway torques. A sufficiently rigid housing is assumed.

Tables are representative of Metal to Metal parts, please consult our engineering department regarding PTFE lined parts.

For GEG, GEGZ, GEW, GEWZ, GAC, GACZ series, consult factory

ISO f6:

Recommended for application where movement of the shaft within the bore of the ball is expected and desired

ISO g6:

Recommended for applications where minor movement is expected or tolerable. Sometimes referred to as "push fit".

ISO h6:

Recommended for applications where minor movement is not desired but is tolerable.

ISO m6:

Recommended for applications where movement between shaft and bearing bore is not desired, and an interference fit is required. Sometimes referred to as "press fit".

NOTE:

Even with m6 fit, under high loads, movement may still occur between shaft and ball bore.

ISO f6:

Recommended for application where movement of the shaft within the bore of the ball is expected and desired

ISO g6:

Recommended for applications where minor movement is expected or tolerable. Sometimes referred to as "push fit".

ISO h6:

Recommended for applications where minor movement is not desired but is tolerable.

ISO m6:

Recommended for applications where movement between shaft and bearing bore is not desired, and an interference fit is required. Sometimes referred to as "press fit".

NOTE:

Even with m6 fit, under high loads, movement may still occur between shaft and ball bore.

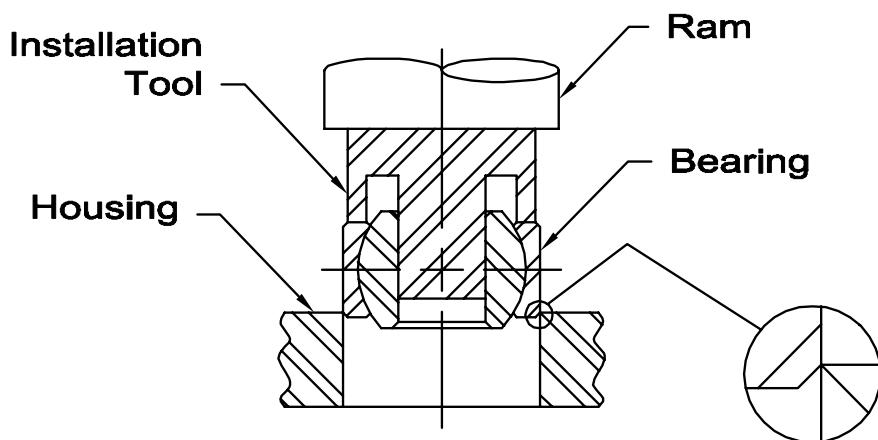

SHAFT DESIGN:

It is generally recommended that shafts or pins be heat treated to a surface hardness of HRc 55 minimum, and have a surface finish of 32 rms or micro inches aa (arithmetic average). In applications with light loads and interference fit, a fully hardened shaft may not be necessary, but is still recommended. Under very heavy loads, an interference fit is no guarantee that there will be no movement of the shaft within the ball bore.

INSTALLATION OF SPHERICAL BEARING

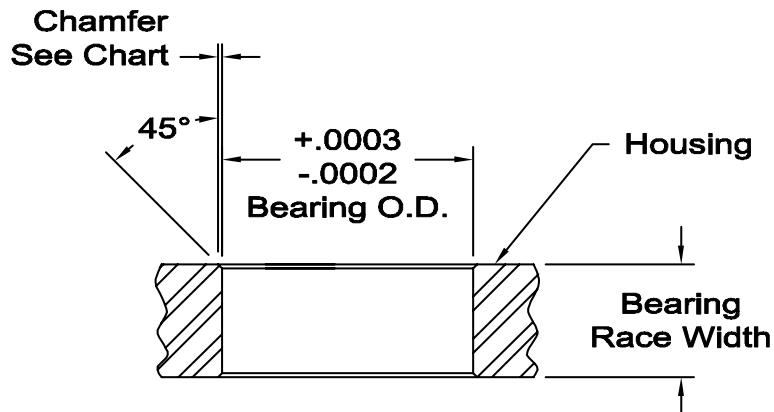

Figure 1

SPHERICAL BEARING INSTALLATION

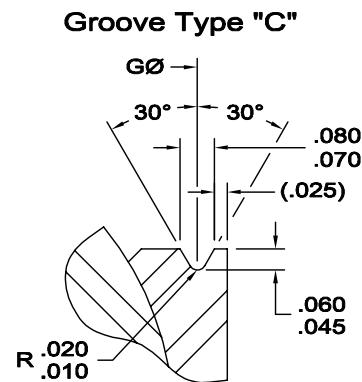

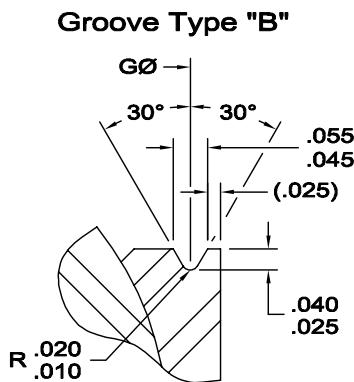

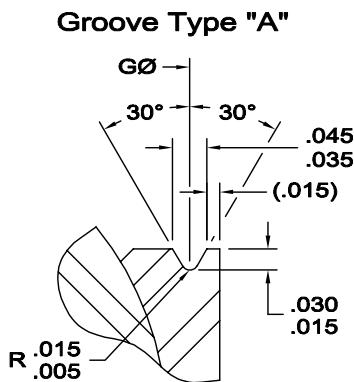

Proper installation of the bearing is important to prevent bearing failure as well as housing damage. Under no circumstances should a tool that induces shock or impact to the bearing be used. The use of an arbor press or hydraulic press is recommended. A tool as shown above (Figure 1) is advised. All force is to be applied on the bearing race face (not on ball). A lead chamfer or radius on the bearing and/or housing is vital.

HOUSING CHAMFER - GROOVED BEARINGS

CHAMFER FOR GROOVE TYPES	
GROOVE TYPE A	.020 ± .005
GROOVE TYPE B	.030 ± .005
GROOVE TYPE C	.050 ± .005

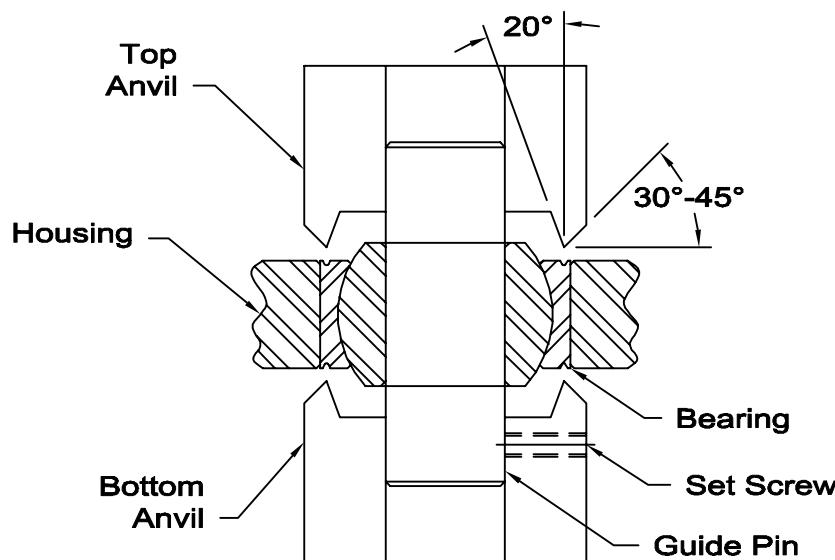

STAKING GROOVE TYPES

INSTALLATION OF SPHERICAL BEARING WITH STAKING GROOVES TOOLS AND STAKING METHODS

Figure 2

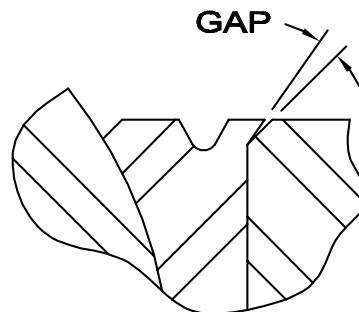

SPHERICAL BEARING INSTALLATION

The bearings have grooves in each side of the bearing race face, leaving a small lip. Staking tools (as shown above in Figure 2) are then used to stake the lip over the chamfer edges of the housing. A typical arrangement consists of two identical anvils and one guide pin which is secured by a set screw in the bottom anvil.

PROCEDURES

1. Install bearing into housing as shown in Figure 1 (pg. 76) and position bearing symmetrical about housing centerline.
2. Align bearing with staking tool and guide pin as shown in Figure 2.
3. A trial stake assembly should be made to determine staking force necessary to meet thrust load requirements. Proper staking force is required because excessive pressure could result in bearing distortion along with life.
4. Pressure established by trial assembly is to be applied. After first stake is completed rotate assembly 90° and re-apply. Repeat operation through a minimum of three rotations to insure 360° uniformity of stake.
5. After staking, a slight gap may exist between race lip and housing chamfer. This slight gap (shown below) may not be cause for rejection if bearing meets or exceeds thrust loads.

PTFE LINER SPECIFICATIONS

PTFE LINERS

PTFE (bonded coated PTFE liner) lined races are available in all three-piece bearing units and all spherical bearings. The steel race has a self-lubricating liner; a PTFE impregnated woven fabric, chemically bonded to the inner diameter of the race. Our PTFE Liners are maintenance free and offer improved frictional characteristics. Following are the liners that Timken Aurora Bearing Company offers.

Liner Designation	AT 1400	AT 2100	AT 2300	AT 3200
Construction	PTFE/Dacron Laminate	PTFE/Fiberglass Weave	PTFE/Dacron Weave	PTFE/Nomex Laminate
Thickness (in.)	.012-.014	.010-.012	.013-.015	.014-.016
Temperature (°F)	-65° to 250°	-65° to 250°	-65° to 250°	-65° to 325°
Static Limit Load	80,000 PSI	60,000 PSI	75,000 PSI	80,000 PSI
Stiffness	Medium to High	Medium	Low	Medium to High
Typical Performance	40,000 PSI @ ±25° & 10-20 cpm .0045 wear max. @ 25,000 cycles	25,000 PSI @ ±25° & 10-20 cpm .0060 wear max. @ 5,000 cycles	Contact Aurora Bearing Company Engineering Department	40,000 PSI @ ±25° & 10-20 cpm .0045 wear max. @ 100,000 cycles
Dynamic Capabilities	Light to medium, unidirectional or alternating loads. Low speed intermittent to continuous misalignment, intermittent to continuous oscillation.	Light unidirectional loads. Low speed, intermittent to continuous misalignment, intermittent to continuous oscillation	Light to medium, alternating or reversing loads. Medium to high speed, intermittent to continuous misalignment, intermittent to continuous oscillation.	Light to heavy, unidirectional or alternating loads. Low speed, intermittent to continuous misalignment, intermittent to continuous oscillation.
Comments	Good multi-purpose system	Excellent stick-slip properties, usually recommended for high splash or underwater applications	Excellent stick-slip properties, good vibratory conditions	Highest performance characteristics for all applications, Qualified to SAE-AS81820 Type A

TEMPERATURE LIMITS

TEMPERATURE LIMITS

The following is a listing of the ultimate temperatures Timken Aurora Bearing Company standard catalog series are capable of operating at. With the exception of the PTFE lined series, all bearings must be well lubricated with a suitable grease to meet the stated temperature.

250° F	300° F	325° F	400° F	500° F	600° F

FREQUENTLY ASKED QUESTIONS

WHAT DIRECTION IS AN AXIAL LOAD APPLIED?

The load is applied through the axis of the ball bore.

WHAT IS THE AXIAL STATIC LOAD CAPACITY OF TIMKEN AURORA BEARING ROD ENDS?

For Aurora two-piece rod ends, the maximum axial static load capacity is recommended to be 15% of the ultimate radial static load capacity. For three-piece rod ends, the maximum axial static load capacity is recommended to be 10% of the ultimate radial static load capacity. However, on three-piece units, factors such as race material, body material, and dimensions may affect the axial static load capacity. For further information, consult the Timken Aurora Bearing engineering department.

WHAT IS THE AXIAL STATIC LOAD CAPACITY OF TIMKEN AURORA BEARING SPHERICAL BEARINGS?

The maximum axial static load capacity on Aurora spherical bearings is recommended at 20% of the radial static load. Extreme care should be used on selecting a sufficiently strong housing to accept this type of bearing.

WHAT DIRECTION IS A RADIAL LOAD APPLIED?

The load is applied through the axis of the shank of the male or female body.

IS THERE A SAFETY FACTOR INCLUDED IN THE ULTIMATE RADIAL STATIC LOAD CAPACITY?

You should assume that there is no safety factor. The bearing will fail at the listed load.

WHAT IS AXIAL PLAY (ENDPLAY)?

The measurement of the total range of movement of the ball inside the insert/body in the axial direction or the clearance measured along the axis of the ball bore.

WHAT IS RADIAL PLAY?

The measurement of the total range of movement of the ball inside the insert/body in the radial direction or the clearance measured along the axis of the shank of the male or female body.

WHAT MAINTENANCE DO I NEED TO PERFORM ON MY ROD ENDS AND SPHERICAL BEARINGS TO KEEP THEM OPERATING PROPERLY?

For metal-to-metal rod ends and spherical bearings, a thin layer of grease applied occasionally to ball outside diameter will assist in extending the life of these products. Rod ends and spherical bearings that are PTFE lined are self-lubricating and are designed to be maintenance free and should not be lubricated.

WHAT IS THE MINIMUM THREAD ENGAGEMENT REQUIRED TO SUPPORT THE LISTED LOAD RATINGS IN THE TIMKEN AURORA BEARING COMPANY CATALOG?

The minimum thread engagement is 1.5 times the major thread diameter unless otherwise stated.

WHAT IS THE THICKNESS OF THE PTFE LINER?

The thickness of the "AT" series PTFE liner is between .012"-.016" thick depending on which liner is chosen. (see page 118)

WHAT IS THE MAXIMUM RPM THAT A ROD END OR SPHERICAL BEARING CAN OPERATE AT?

When a rod end or spherical bearing is to be applied in full rotation, the surface speed of the ball should be kept below 20 feet per minute or the rotational speed should be below 100 RPM, whichever is lower, with the operating loads not to exceed 10% of the ultimate radial static load capacity.

WHAT IS THE OPERATING TEMPERATURE OF PTFE LINED BEARINGS?

Commercial grade liner = -65°F to +250°F

AS8120, Type A liner = -65°F to +325°F

(see pages 118 – 119)

HOW MUCH CORROSION RESISTANCE DO ZINC PLATED ROD ENDS PROVIDE?

All zinc plated rod ends are plated to meet or exceed the requirements of ASTM B 633.

DOES TIMKEN AURORA BEARING COMPANY OFFER 2D AND 3D DRAWINGS OF THEIR BEARINGS?

Yes, they can be found under the "CAD Drawings" at cad.timken.com. See page 125 for further information

DOES TIMKEN AURORA BEARING COMPANY OFFER CUSTOM OR MADE TO ORDER BEARINGS?

Yes, Timken Aurora Bearing has the ability to manufacture many types of specialty bearings not listed in the catalog.

	Grease Fitting	تربيبة تشحيم	तेल नपिल
H	Head or Race Width	العرض	आवास की चौड़ाई
	Industrial grade	جودة صناعية	औद्योगिक शरणी
	Keyway	مجرى الخابور	कुंजी स्लॉट
	Left Hand	شمالي	बायाँ हाथ
	Load capacity	قدرة التحمل	लोड क्रमस्ता
	Male thread	سن مخروطية خارجي	पुरुष धागा
	Military Specification	المواصفات العسكرية	सेन्य वनिश्विरेशॉ
	Misalignment	اختلاف المعاذنة	सरेरखन कोण
	Race	لاغراض السباق	टॉड
	Radial	محوري	रेडियल
	Right Hand	يمني	दायाँ हाथ
	Radial Static Load Capacity	حمل الضغط المحوري	रेडियल स्थिर भार क्रमस्ता
	Rod end	طرف عمود	रॉड समाप्त होता है
	Spherical bearing	بلدية كاتينة - حوامل كرات بلي	गोलाकार असर
	Stainless steel	فولاذ مقاوم للصدأ	स्टेनलेस स्टील
	Steel	فولاذ	धागा
	Thread	سن مخروطية	धागा लंबाई
C	Thread Length	طول سن مخروطية	गेंद की चौड़ाई
W	Width of ball	عرض الكرة المكروبة	

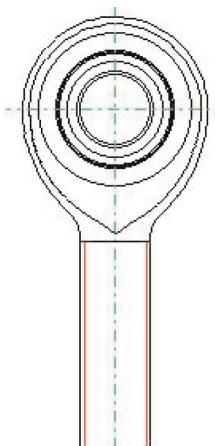

**EXCLUSIVE:
2D AND 3D CAD DRAWINGS OF AURORA BEARING
ROD END AND SPHERICAL BEARINGS**

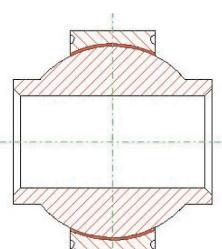

Cross section, MM-8T

3D model, MM-8T

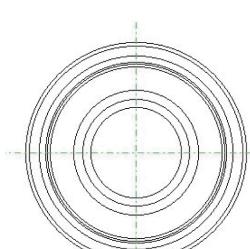

Front view, MM-8T

Cross section, HAB-6TG

3D model, HAB-6TG

Front View, HAB-6TG

Timken Aurora Bearing has developed a CAD drawing library of its entire catalog offering of Rod End and Spherical Bearings, including Mil Spec approved parts. These 2D and 3D images are importable into most major CAD and solid modeling packages, and includes both line drawings and 3D models.

Files are accessible at cad.timken.com.

Try us online... where we're more than a website, we're a resource!

The Timken Aurora Bearing website is more than just an Internet location for the Timken Aurora Bearing product catalog. It allows immediate access to:

- exclusive Timken Aurora Bearing CAD drawing library
- technical resources such as industry terms and definitions
- answers to frequently asked technical questions
- reprints of articles regarding rod ends and spherical bearings
- in-depth technical data
- interchange guides for parts used in specialized industries
